Windows scripting is similar to a macro. While macro code is embedded in AutoCAD, Windows scripting runs in its own environment in the Windows operating system and can perform complex calculations and automated tasks. Windows scripting is available in the Add-on Tools menu of the AutoCAD 2018 program, and can be included in AutoCAD drawing files and documents. Scripting Windows scripting is a scripting language that is used to automate various tasks such as: processing images (layers or drawings) comparing layers to each other generating shapes merging layer styles (based on their source) creating cross-sections capturing drawings displaying a list of drawings highlighting a set of coordinates registering a
