AutoCAD is commonly used for architectural and civil engineering purposes, but its functions are similar to those of any CAD software. AutoCAD is a valuable asset for students who may be introduced to CAD through the use of AutoCAD as an alternative to digital drawing applications on the desktop computer. If you're interested in learning more about AutoCAD you can read our article about the basic functions and features of AutoCAD here. Pricing: AutoCAD is sold in two versions: AutoCAD LT (with basic features, only), and AutoCAD LT with Drafting (with the same features as AutoCAD LT but also including DWG and DXF files). More information on the AutoCAD 2016 software: AutoCAD's basic history: The current AutoCAD software version is AutoCAD LT 2016. Originally, the first version of AutoCAD, released in 1983, was called AutoCAD R5, and was the first true desktop CAD application. R5 was similar to the first major commercial CAD application, LISP, which was released by Computer Drafting Corporation (CDC) in 1979. CDC developed AutoCAD R5 by taking its LISP software and adding it to the CDC Centura Display-11, which was the only PC based display terminal in the industry. The user interface of AutoCAD R5 was one of the first to be composed on a proprietary format called a GUTI. AutoCAD used this interface format to control how a user typed commands into the program. In 1983, when AutoCAD R5 was introduced, software developers were using the Apple II, Commodore 64, and IBM PC/XT in the early 1980s. AutoCAD R5 and LISP were viewed as Apple II only applications, and the other platforms required only a command-line system. AutoCAD R5 was a program that ran on CDC's Centura Display-11, and the first command-line interface (CLI) was used. AutoCAD R5 also supported a built-in teletype printer, called a dot printer. AutoCAD R5 was not the first software application to support a dot printer. The SONIC was the first commercially produced software application to use a dot printer. The SONIC used its own software called the Universal DotWriter (UDW). The SONIC shipped in 1976, and the UDW shipped in

However, it is significant that the court instructed the jury to consider only evidence "from the witness stand and not from any other source," and it is noteworthy that the prosecutor in closing argument made clear that the jurors could not consider the trial court's oral instruction. Thus, we cannot say with any certainty that the prosecutor in closing argument had the jury's attention focused on a matter or statement that was outside the evidence. In short, we cannot say that the prosecutor's statements in closing argument were improper. {¶ 46} Accordingly, we find no merit to appellant's third assignment of error. {¶ 47} In the fourth assignment of error, appellant contends that the trial court erred in denying his request for an involuntary intoxication instruction. We disagree. {¶ 48} The trial court's failure to give an instruction of involuntary intoxication is subject to harmless error analysis. State v. Hutton (Aug. 31, 1998), 5th Dist. An involuntary intoxication instruction is required only when there is evidence of "actual or implied admission of the involuntary nature of the intoxication." Hildebrant at 137. "A defendant may, by his own words or acts, admit the involuntary nature of his intoxicated state and thus remove himself from the coverage of the involuntary intoxication instruction."
