Import from a form you designed in CAD or another program. This feature lets you import a form that contains labels, check boxes, text, and more. Use AutoCAD to enter data, and you can import your form into your drawings as labels, text, or blocks. Easily create a source file by using the same tool you're familiar with. Create content that is similar to a PDF or PowerPoint file, with less effort. Then, simply open your source file from within AutoCAD and see your content automatically incorporated into the drawing. Create content in the way you want it. You can use your preferred drawing creation methods to organize your content, including labeling, text, shapes, blocks, and more. Then, save your content in the format you choose for either web use or final output. Make graphics more accessible. Use configurable visual styles to display visual information and elements in a consistent way, making it easier for other users to recognize and understand. Use Data Management to work with data in many formats. Edit, view, combine, and consolidate multiple data formats in a single table view. Easily work with multiple sources of data in the same drawing. You can use Data Management and Data Merge to easily import data and merge data together. You can also use multiple databases and linked tables in AutoCAD for even more flexibility. Use the new TableViewer to create, edit, and sort multi-dimensional tables. Use table filtering to quickly view rows in a table by category, alphabetically, or sequentially. Autodesk Maya 2016 adds many new features, such as new visualization modes that let you use your computer's GPU (graphics processing unit) to render visual effects. You can also use Maya's built-in visual tools and plugins to add new effects to your animations, 2D and 3D objects, and videos. Easy Autodesk VR: Instantly experience CAD data with VR. Use VR to move, look around, and interact with 3D objects in real time in a virtual environment. When you're in VR, you can rotate your model in any direction and look around in 3D. Move your 3D model with any hand-held device or the keyboard and mouse. You can use either the mouse or a separate mouse-like tracking device to navigate VR. Let objects interact
