Spiffy Torrent Download is a Gmail notification tool that pops up alerts whenever you receive a new email. It features a bunch of handy customization options that can be easily figured out by users, regardless of their level of experience with such apps. Accessibility via the system tray Setting up the program takes little time and minimal effort. At startup, it creates an icon in the system tray area. Double-clicking it brings up a normal window that shows log details and lets you customize app properties. Configure up to five Gmail accounts It is possible to set up to five different Gmail accounts to monitor at once, specify account names and the frequency for checking up new emails (in minutes), as well as ask Spiffy to look into just a particular Gmail Label instead of the entire inbox. Settings can be restored to default. Rich customization settings The log details from the main window can be either hidden or cleared. As far as program configuration is concerned, you can make the tool run at every Windows startup until further notice, customize alerts when it comes to the notification display time, change the tray icon for new emails and enable sound alerts, use proxies, enable a custom browser when loading the Gmail account, and more. Evaluation and conclusion The tool does not put a strain on PC performance, since it runs on low CPU and RAM. It has a great response time and worked smoothly in our tests, without causing Windows to hang, crash or pop up error messages. There is also a portable counterpart called Spiffy Portable, in case you want to run the app directly from a pen drive. When it comes down to it, Spiffy offers a very simple solution to automatically checking Gmail accounts for new messages, supports up to five accounts at once, and it is backed by numerous customization options. Asymptomatic zygomatic arch fractures in children: A radiographic analysis of the morphology and anatomic classification. To present the radiographic characteristics and anatomic classification of zygomatic arch fractures (ZAF) in children and to provide a clinical guideline for diagnosing and treating such fractures. A retrospective review of

It is a simple Mac OS X utility program that can do quite a lot. It runs silently in the background and is very easy to use. You can even run it as a command-line tool. To do so, add the -q parameter when you start the program and switch to the terminal to access the program via the Terminal.app. KEYMACRO Settings: You can set up up to five different macros, along with their respective keys. The user interface displays current keystrokes and their repeats. Keystrokes can be saved and loaded via the file menu. You can also select a particular group to assign keystrokes to and define actions to be performed on the keystrokes that belong to that group. For example, if you set the Shell item to run an external command in the Sublime Text editor, KeyMacro will automatically close the editor after a keystroke is typed. One-click activation Each of the macros you set up can be activated from the keyboard. Simply double-click a macro to assign a shortcut to it, and add a single-click to actually run the assigned command. Rerun assigned macros when the program is closed There is a great setting called "Perform macro upon program exit" that will trigger an assigned macro to be performed when the program is closed. For instance, you might want to type a few lines of text to a file, change some text, or simply reboot the computer when this option is enabled. You can also configure custom actions to be performed when exiting the program or opening it again. KeyMacro can be integrated into your applications Like its name suggests, KeyMacro is a Mac OS X utility program that can work with any application via AppleScript. You can add the KeyMacro item to the top menu bar or create your own keyboard shortcuts that can activate a specific action from an app. KeyMacro Review: The program is incredibly easy to use and allows you to monitor all of your active keystrokes in a single place. It supports up to five different macros that can be assigned to various commands and actions, and you can even customize Mac OS X actions on keystrokes. Users who are looking for an easy-to-use app that can automate some of their tasks should give KeyMacro a try. [akismet-security] Softpedia reviewed the free release of PrivacyShield, a Google Chrome extension that is capable of hiding your personal information when 2edc1e01e8

What's New in the?

Spiffy is an excellent Gmail Notifications tool that monitors new emails and pop up alerts on your computer. This handy tool displays a new email when a new message arrives, and it can be triggered to look into a particular Gmail label. Spiffy is also capable of using proxies for increased security and usage. Spiffy was built to provide a simple solution for checking Gmail accounts for new emails. The application can monitor five Gmail accounts at once and can be configured to check in every 5 or 15 minutes. In addition to the regular Gmail account, the tool can use Gmail labels to target specific messages for monitoring. To avoid looking at uninteresting emails, Spiffy can be configured to check only when the subject of the email matches a specified string. Finally, users can enable custom browser settings and change the notification sound as well.
