We try to help answer all of the most common questions and issues in the battery world. Please let us know what we can do to help with the questions that you are having and what have been the most common issues that we have been able to help resolve. We hope this will be a great resource for the customer and dealer alike. WE are a LEADER in the production of quality battery products. Maintaining a high level of quality in all our products and manufacturing processes has been the foundation of our company. We are ONE OF THE FIRST IMPORTERS of Li-Polymer batteries, and the NEMA 4X standard is MADE IN THE USA. We also follow our own warranty standards for manufacturers. Battery performance is a DIRECT result of manufacturing process, and CORE to our continued success. WE don't "Measure, only DEFINE", and ensure that quality will remain the top priority at ALL levels of our company. We are proud of the team of people that continue to make the Wireless Power Boost available to the enthusiast and professional. The "Wireless Power Boost" is a standard that has been put into place by the industry to allow electricians to locate and troubleshoot the disconnection of charging systems at location. A standard that has been used for years, the Radio Frequency of the boost wire allows the mobile and non-mobile devices to remain charging and without "dead zones". Every Power Supply builds on a different set of strengths and weaknesses. And the Energy Star certification is no different, yet these rating standards are a definite source of confusion for sales reps and customers. Our goal is to help you with a basic understanding of how these ratings are calculated so you can understand how the standards work and your products compare. Imagine a device that you could live without; a device that would keep you on the edge of your seat waiting for the next episode of your favorite show. This is available, now, for

I have a Parse POST request that updates my local database. I want to display a VC/Modal while it's updating, after it's finished the operation will be called and then the Parse method will be called. I have gotten as far as creating a ParseOperation, and initializing it with a closure. It sends the VC to the background and calls the block closure 04aeff104c
