Microsoft Power Query For Excel Crack X64

Microsoft Power Query for Excel Activation Code is a software solution that is provided in two flavors, 32- and 64-bit. The 32-bit version of this app can be used to perform a limited set of analyses and transform the data you want to. On the other hand, the 64-bit version can carry out a broader set of tasks and you'll be able to do it with a much greater degree of success. Apart from the fact that the 64-bit version of this software allows you to carry out deeper data transformations, it also includes additional data sources that are not available in the 32-bit version of the app. For example, you'll be able to search a variety of Excel-based sources, including XML files, web pages, tables and OData feeds, within this version. Furthermore, the 64-bit version of this software also features Hadoop and SQL Server integration, so you'll be able to use this app in order to discover and transform data that you can get in these formats. In addition, the 64-bit version also allows you to carry out various analyses and apply powerful transformations to the data you want, including the ability to use complex formulas, create calculated fields and calculate and transform dates and numbers. The software solution also includes some intuitive tools that will help you easily discover and transform data of interest. On top of that, this app also supports custom visualizations and you'll be able to create your own custom queries that can then be saved, shared and used across different users. Furthermore, this software solution includes a set of Excel add-ins that enable you to use this app in ways you never thought possible when you're using the standard Excel. In addition, you'll also be able to create and use mobile applications as well arransform data from other Office apps using this app. Microsoft Power Query for Excel Review: In order to provide a more detailed look at this software solution, we've compiled a list of the features it has to offer below: *Discover, transform analyze data from multiple sources *Filter data
