Cinamour 2.The present invention relates to bearings for use in hard disk drives. Hard disk drives are used for data storage in computers. Each disk in the drive has a plurality of concentric tracks on which data is stored. To read or write data, a read/write head must be positioned above a desired track of the disk. To do this, the disk is rotated at a speed such that the desired track is kept beneath the head. In order to keep track of a desired track, servo information is used. The servo information is recorded at prescribed intervals on each track of the disk and contains information concerning the location of the desired track. The position of the head is controlled by the servo information, and the servo information is read, typically by a combination of a sensor and a lens, to provide position information to guide the head to the desired track. FIGS. 1 and 2 illustrate a conventional disk 10 in a hard disk drive. The disk 10 has a plurality of tracks 12 that are divided into a plurality of sectors 14. Each sector 14 stores a portion of the servo information. An example of one such sector 14 is illustrated in FIG. 1. The servo information has a sequence of address information 20, followed by a sequence of position information 18. The position information 18 generally comprises an X position 22 and a Y position 24. Each track 12 of the disk 10 contains several sectors 14. The servo information is recorded on each track 12 in a separate sector 14. The servo information is written and read by a combination of a sensor and a lens. Typically the servo information 20, 18 is written before the space 23 is filled with data. Before the disk 10 is processed to form the various sectors 14, the servo information 20, 18 is recorded on the disk 10, as illustrated in FIG. 2. A servo track writer (not shown) then records the servo information 20, 18 in the prescribed sectors 14, 14 of the disk 10. A servo track writer includes a device that records the servo information 20, 18 on the disk 10. The servo writer is used to prevent contamination by creating a clean environment. The servo writer, like any other apparatus, has its limitations. Because a disk 10 typically has a diameter of several inches,
