Using a 3-D structure of hydrolase to define a catalytic peptide sequence. Enzyme mutants allow protein-protein interaction analysis and yield important information about protein functionality. However, mutant proteins often perturb the normal function of the protein of interest and it may not be possible to make the protein of interest work at all. Here, we show that a modification of hydrolases can be used to produce a stable, functional form of a hydrolase protein that still retains its native 3-dimensional structure. We use this approach to identify the catalytic and regulatory residues of an uncharacterized bacterial hydrolase, Asp-specific phosphomonoesterase. Our results provide a foundation for the in vitro function analysis of hydrolases and may offer a general approach for functional analysis of other proteins. Battle of the Bulge, as was the entire four years of the war, witnessed two worlds, each holding different values, philosophies, personal histories, opposing ideologies, and ultimately, determination to win. The United States of America on the West side of the globe and the Nazi regime in Germany on the East side of the globe were at war to the end. Both sides attempted to accomplish their goals through multiple war strategies, and it was the result of these efforts that would determine the future of the world. The Battle of the Bulge was a German winter offensive that began on December 16, 1944, and continued for several months. The battle occurred in the Ardennes Forest in the department of Luxembourg (now Luxembourg), Belgium. It was a desperate attempt to divert Allied forces away from the vital German city of Aachen, the Rhineland, and the Siegfried Line. The Germans had slowly been pulling forces away from the salient in the Battle of the Bulge, and were able to use December 17 as the point in the offensive to begin pulling back troops to the original forces. The German strategy was to start the offensive in the middle of the Allied defense line, near Antwerp, Belgium and then push towards the Allied lines to gather support from the rear. The
