The Photoshop line of creative applications is immensely powerful. They are meant to be used by professionals who want their money's worth. That said, for anyone getting to see the inside of their creative tool of choice at work, it makes for another one of those "tour de force" moments. Sure, it's not easy to get started, but the learning curve is more than made up for by the ultimate ability of the power. Much like its brother Photoshop Express, Photoshop Touch is a direct competitor to Instagram. It offers full Photoshop editing on your Windows Phone, with more that you can't find on the competition like a full effects and publishing or even more. This app is for anyone holding a Windows Phone that wants to repurpose their phone photos to be viewed on the web. To date, Adobe Photoshop remains the photographer's favorite desktop "beloved" application for virtually all professional and hobbyist image editing, creative, and post-processing tasks. Photoshop inspires best-selling plug-ins, collections of filters, and editor-created brushes, all aimed at helping photographers to improve their craft in a much wider range of styles, formats, and specific needs. (Photoshop is also a trademark of Adobe Systems, Inc.) The new version of Lightroom has a lot of good enhancements over Lightroom 4. The Lightroom used to be the only version that allowed you to crop in the editors. But in Lightroom 5, you can also rotate, flip, crop, and adjust the colors and tone. You can only crop in the editor when you have the smart previews open in the left menu bar. If you want to crop, the left hand side should be filled with smart previews (dngs). If you open the smart previews and you have a D700 NEF, you can rotate, flip, crop but not adjust the white balance and colors. This little limitation might render Lightroom useless for some photographers and it is a total pain. Lightroom 5 is not a perfect upgrade over Lightroom 4. Editing in Lightroom could be easier. In Lightroom 5, you can't see if you are editing a JPEG or DNG, if you set the default format to a DNG you can't see what format the camera used. Lightroom 5 doesn't have the view options that are found in the menu Bar of Lightroom 4.
